SHORTENED STATUTORY PERIOD OF RESPONSE	MAIL DATE	DELIVERY MODE
3 MONTHS	01/30/2007	PAPER

**Please find below and/or attached an Office communication concerning this application or proceeding.**

If NO period for reply is specified above, the maximum statutory period will apply and will expire 6 MONTHS from the mailing date of this communication.

<b>Office Action Summary</b>	<b>Application No.</b> 10/816,396	<b>Applicant(s)</b> MCDANIEL ET AL.	
	<b>Examiner</b> Alex B. Toy	<b>Art Unit</b> 3739	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

#### Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

#### Status

- 1) ☒ Responsive to communication(s) filed on 12 January 2007.
- 2a) ☐ This action is FINAL. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

#### Disposition of Claims

- 4) ☒ Claim(s) 1-4,7,11-15,17-22 and 31-33 is/are pending in the application.
- 4a) Of the above claim(s) \_\_\_\_\_ is/are withdrawn from consideration.
- 5) ☐ Claim(s) \_\_\_\_\_ is/are allowed.
- 6) ☒ Claim(s) 1-4,7,11-15,17-22 and 31-33 is/are rejected.
- 7) ☐ Claim(s) \_\_\_\_\_ is/are objected to.
- 8) ☐ Claim(s) \_\_\_\_\_ are subject to restriction and/or election requirement.

#### Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☒ The drawing(s) filed on 31 March 2004 is/are: a) ☒ accepted or b) ☐ objected to by the Examiner.  
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).  
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

#### Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some \* c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
  2. ☐ Certified copies of the priority documents have been received in Application No. \_\_\_\_\_.
  3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).
- \* See the attached detailed Office action for a list of the certified copies not received.

## DETAILED ACTION

### *Response to Amendment*

This Office Action is in response to applicant's Request for Continued Examination filed on January 12, 2007. All previous prior art rejections are withdrawn.

### ***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

Claims 1-4, 7, 13, 17-20, 22, and 31 are rejected under 35 U.S.C. 103(a) as being unpatentable over Diederich et al. (U.S. Pat. No. 6,117,101) in view of Abele (U.S. Pat. No. 5,860,974).

Regarding claim 1, Diederich et al. disclose a catheter comprising:

an elongated catheter body 652 having proximal and distal ends and at least one lumen therethrough (Fig. 13);

a three-dimensional ablation assembly 650 at or near the distal end of the catheter body, said assembly having a framework 651 defining a length and a circumference, the assembly movable into a collapsed configuration with a greater length and a lesser circumference and an expanded configuration with a lesser length and a greater circumference, the framework comprising a plurality of tensile members interwoven in a manner such that the length increases as the circumference decreases and vice versa (col. 26, ln. 38-44 and Fig. 13);

said assembly also having a ribbon electrode extending along said circumference, said ribbon electrode adapted to move with said framework (col. 27, ln. 12-25).

The claim differs from Diederich in calling for a tip electrode mounted at or near a distal end of the ablation assembly. Abele, however, teaches that it is obvious to use an analogous expandable cage electrode to ablate a heart chamber wall in order to correct arrhythmias (col. 1, ln. 12-15 and Figs. 24-25). Abele further teaches that it is advantageous to have a tip electrode mounted at a distal end 76 of such an ablation assembly 72 in order to sense cardiac signals to locate the target tissue to be ablated and/or to provide an additional ablation electrode (col. 7, ln. 35-45, col. 8, ln. 7-8, 58-64, and Figs. 13, 17, and 18). Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to have mounted a tip electrode at the distal end of the ablation assembly of Diederich in view of the teaching of Abele in order to sense cardiac signals to locate the target tissue to be ablated and/or to provide an additional ablation electrode.

Regarding claim 2, Diederich further discloses that said framework of the assembly in the expanded configuration has a first circumference in a first section along its length and a different second circumference in a second section along its length (col. 26, ln. 38-44 and Fig. 13).

an expander 653 attached at or near its end to distal ends of the tensile members 651, the expander being longitudinally moveable relative to the catheter body 652 to expand and collapse the ablation assembly (col. 26, ln. 34-44 and Fig. 13).

Regarding claim 3, Diederich further discloses an expander 653 attached at or near its end to distal ends of the tensile members 651 (col. 26, ln. 34-44 and Fig. 13) and extending through the catheter body (col. 26, ln. 26-35), the expander having a proximal end that extends out the proximal end of the catheter, and having a lumen extending therethrough (col. 26, ln. 34-44 and Fig. 13), whereby, in use, the expander can be moved longitudinally relative to the catheter body 652 to expand and collapse the ablation assembly.

Since the expander 653 is used to expand the ablation assembly, it must inherently have a proximal end that extends out the proximal end of the catheter body so that the user can actuate it.

Regarding claim 4, Diederich further discloses that the expander 653 extends through at least a distal portion of the catheter body 652 (col. 26, ln. 26-44 and Fig. 13). In addition, see the preceding rejection of claim 3.

Regarding claim 7, Diederich further discloses that the expander is moved proximally to actuate the assembly into the expanded configuration (Fig. 13).

Regarding claim 13, Diederich further discloses that the expander has a proximal end attached to a control handle. Since the expander is used to actuate the assembly expansion, the expander must inherently have a control handle to allow the user to actuate the expander.

Regarding claim 17, Diederich further discloses that the expander 653 is generally coaxial with the catheter body 652 (Fig. 13).

Regarding claim 18, Diederich further discloses that the expander 653 forms the axis of the assembly 650 (Fig. 13).

Regarding claim 19, Diederich further discloses that the assembly 650 comprises at least four tensile members 651 (Fig. 13).

Regarding claim 20, Diederich further discloses that each tensile member 651 comprises an internal flexible wire and a non-conductive covering over the flexible wire (col. 27, ln. 5-6 and Fig. 13).

Regarding claim 22, Diederich further discloses that the ribbon electrode is elastic (col. 27, ln. 12-25).

Regarding claim 31, the claim differs from Diederich in calling for a plurality of ribbon electrodes. It would have been obvious, however, to one of ordinary skill in the art at the time the invention was made to provide a plurality of ribbon electrodes, since it has been held that mere duplication of the essential working parts of a device involves only routine skill in the art. *St. Regis Paper Co. v. Bemis Co.*, 193 USPQ 8.

Regarding claim 31, the claim differs from Diederich in calling for a plurality of ribbon electrodes. Abele, however, teaches a plurality of ribbon electrodes 40, 42 on an

Art Unit: 3739

analogous expandable member in order to allow bipolar ablation (col. 3, ln. 29-32, col. 6, ln. 49-54 and Figs. 4-5). Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to have provided a plurality of ribbon electrodes in the device of Diederich in view of the teaching of Abele in order to allow bipolar ablation.

Claims 11-12, 14, and 21 are rejected under 35 U.S.C. 103(a) as being unpatentable over Diederich et al. ('101) in view of Abele ('974) and further in view of Webster, Jr. (U.S. Pat. No. 5,772,590).

Regarding claim 11, Diederich discloses that the expander comprises a tube (col. 26, ln. 34-36). The claim differs from Diederich et al. in calling for the expander to comprise plastic tubing. Webster, Jr., however, teaches an expandable electrode catheter with an expander 56 comprising plastic tubing (col. 9, ln. 12-13 and Fig. 10). Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to have made the expander of Diederich et al. comprise plastic tubing in view of the teaching of Webster, Jr. because plastic is an obvious alternate material for constructing tubes that is well-known in the art.

Regarding claim 12, Diederich discloses that the expander comprises a tube (col. 26, ln. 34-36). The claim differs from Diederich et al. in calling for the expander to comprise braided plastic tubing. Webster, Jr., however, teaches an expandable electrode catheter with tube 7 comprising braided plastic tubing (col. 5, ln. 13-16 and Fig. 1). Therefore, it would have been obvious to one of ordinary skill in the art at the

Art Unit: 3739

time the invention was made to have made the expander of Diederich et al. comprise braided plastic tubing in view of the teaching of Webster, Jr. because braided plastic is an obvious alternate material for constructing tubes that is generally known in the art (pg. 14 of applicant's specification).

Regarding claim 14, the claim differs from Diederich et al. in calling for the control handle to comprise:

a handle housing having proximal and distal ends, and a piston having a proximal end mounted in the distal end of the handle housing and a distal end fixedly attached to the proximal end of the catheter body;

wherein the proximal end of the expander is fixedly attached, directly or indirectly, to the handle housing so that longitudinal movement of the piston relative to the handle housing results in longitudinal movement of the expander relative to the catheter body to thereby expand and collapse the assembly.

Webster, Jr. ('590), however, teaches an expandable electrode catheter with a control handle 50 (Fig. 9) comprising the handle of U.S. Pat. No. 4,960,134 also to Webster, Jr. (incorporated by reference into Webster, Jr. '590).

With reference to Webster, Jr. ('134), the control handle 13 comprises:

a handle housing 40 having proximal and distal ends, and a piston 46 having a proximal end mounted in the distal end of the handle housing and a distal end fixedly attached to the proximal end of the catheter body 11 (col. 4, ln. 45-49 and Fig. 4);

With reference to Webster, Jr. ('590), the control handle 50 comprises an expander 54, wherein the proximal end of the expander is fixedly attached, directly or

Art Unit: 3739

indirectly, to the handle housing so that longitudinal movement of the piston relative to the handle housing results in longitudinal movement of the expander relative to the catheter body to thereby expand and collapse the assembly (col. 8, ln. 61 – col. 9, ln. 7 and Figs. 9-10).

Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to have made the control handle of Diederich et al. to comprise the control handle of Webster, Jr. ('590/'134) in view of Webster, Jr. ('590) as an obvious way to expand the tensile members of Diederich et al. that is known in the art.

Regarding claim 21, Diederich discloses that the internal flexible wire of each wire comprises a superelastic metal alloy, such as an alloy of nickel and titanium, or a combination of both (col. 26, ln. 63-65). The claim differs in calling for the internal flexible wire of each wire to comprise nitinol – a specific type of nickel and titanium alloy. Webster, Jr. ('590), however, teaches an expandable electrode catheter, wherein the tensile member wires comprise nitinol (col. 6, ln. 27-38). Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to have made the internal flexible wire of Diederich et al. from nitinol in view of the teaching of Webster, Jr. ('590) because nitinol is an obvious specific type of nickel and titanium alloy that is well-known in the art.

Claim 15 is rejected under 35 U.S.C. 103(a) as being unpatentable over Diederich et al. in view of Abele ('974) in view of Webster, Jr. ('590) in view of Edwards

Art Unit: 3739

et al. (U.S. Pat. No. 5,471,982) and further in view of Webster, Jr. (U.S. Pat. No. 6,183,463 B1).

Regarding claim 15, The claim differs from Diederich et al. in calling for the proximal end of the expander to extend outside the proximal end of the control handle and through a support tube.

Edwards et al. teach an expandable electrode catheter, wherein fluid is introduced to the point of ablation through the expander tube 240 to keep the electrodes free of tissue buildup and blood (col. 19, ln. 50 – col. 20, ln. 2 and Figs. 12 and 26). Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to have included fluid introduction through the expander tube of Diederich et al. in view of the teaching of Edwards et al. to keep the electrodes free of tissue buildup and blood.

Webster, Jr. ('463) teaches an electrode catheter, comprising the piston control handle of Webster, Jr. ('590/'134) with a fluid introduction tube 88 that starts at the distal electrode end and then extends outside the proximal end of the control handle and through a support tube 91 (col. 8, ln. 18-26, col. 9, ln. 7-26, and Figs. 1-4). Fluid is introduced through the luer hub 90 (col. 8, ln. 33-39 and Fig. 1).

Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to have the proximal end of the expander/fluid introduction tube of Diederich et al. in view of Edwards et al. to extend outside the proximal end of the control handle of Diederich et al. in view of Webster, Jr. ('590/'134) and through a support tube further in view of the teaching of Webster, Jr. ('463) as an obvious

Art Unit: 3739

alternate way of introducing fluid that is known in the art for use with the control handle of Webster, Jr. ('590/'134).

Claims 32 and 33 are rejected under 35 U.S.C. 103(a) as being unpatentable over Diederich ('101) in view of an alternate embodiment of Diederich ('101).

Regarding claim 32, Diederich discloses a catheter comprising:

an elongated catheter body 652 having proximal and distal ends and at least one lumen therethrough (Fig. 13); and

a three-dimensional ablation assembly 650 at or near the distal end of the catheter body, said assembly having a framework 651 defining a length and a circumference, the assembly movable into a collapsed configuration with a greater length and a lesser circumference and an expanded configuration with a lesser length and a greater circumference, the framework comprising a plurality of tensile members interwoven in a manner such that the length increases as the circumference decreases and vice versa (col. 26, ln. 38-44 and Fig. 13),

said assembly also having a ribbon electrode extending along said circumference, said ribbon electrode adapted to move with said framework (col. 27, ln. 12-25).

The claim differs from Diederich in calling for the framework to be sufficiently flexible that the diameter need not be constant along the length and the length need not be constant along the circumference so that the framework can conform to an interior volume of a nonuniformly-shaped tubular region. In an alternate embodiment, however,

Art Unit: 3739

Diederich teaches a cage framework 352 that is radially compliant and in accordance with claim 32 in order to allow the ablation member to conform to a pulmonary vein ostium (col. 18, ln. 45-58 and Fig. 7b). Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to have made the cage framework of Diederich radially compliant and in accordance with claim 32 in view of the teaching of an alternate embodiment of Diederich in order to allow the ablation member to conform to a pulmonary vein ostium.

Regarding claim 33, the claim differs from Diederich in calling for a plurality of ribbon electrodes. It would have been obvious, however, to one of ordinary skill in the art at the time the invention was made to provide a plurality of ribbon electrodes, since it has been held that mere duplication of the essential working parts of a device involves only routine skill in the art. *St. Regis Paper Co. v. Bemis Co.*, 193 USPQ 8.

Claim 33 is rejected under 35 U.S.C. 103(a) as being unpatentable over Diederich ('101) in view of an alternate embodiment of Diederich ('101) and further in view of Abele ('974).

Regarding claim 33, see the preceding rejection of claim 31.

### ***Response to Arguments***

Applicant's arguments with respect to the pending claims have been considered but are moot in view of the new ground(s) of rejection.

Application/Control Number: 10/816,396
